No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A Geneseq 19Jun03:*

The invention relates to the human growth factor homologue zvegf4

(AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

CC (AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member

CC characterised by a PDGF cystine knot structure, and a CUB domain

Growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

CC characterised by a PDGF cystine knot structure, and a CUB domain

CC (AAB48655) which has a bera barrel structure. Zvegf4 has PDGF-like

activity, having mitogenic activity on fibroblasts, vascular smooth

cuscic cells and pericytes, and has also been shown to stimulate bone

activity, having mitogenic activity on fibroblasts, vascular smooth

cuscic cells and pericytes, and has also been shown to stimulate bone

CC growth. The invention also relates to fusion proteins comprising human zvegf4

cucleic acids; the recombinant expression of human zvegf4, an antibody

which binds to human zvegf4 or a fragment famina zvegf4, an antibody

which binds to human zvegf4 or a fragment activin, migration or

method of modulating the proliferation, differentiation, migration or

coll-surface PDGF receptor using a zvegf4-derived polypeptide; a

coll-surface PDGF receptor using a zvegf4-derived polypeptide;

a cell-surface PDGF receptor using a zvegf4-derived polypeptide;

complements may be used to stimulate tissue development or repair, or

creament or repair of liver damage, and mey also be used to

collular differentiation or proliferation. They are particularly used

collular differentiation or proliferation. They are particularly used

This shows a murine ZVBGF3 a novel vascular endothelial growth factor homologue. Polypeptides comprising an epitope-bearing portion human or murine ZVBGF3 are claimed. The growth factors comprises a growth factor domain and a CUB domain (generic sequence motifs are shown in AAY96859 and AAY96860). The growth factor domain is characterized by an exrangement of cysteine residues and beta-strands that is characteristic of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CUB domain shows homology to CUB domains in currentlins, human bone morphogenetic protein. To protein seminal plasma croptocin. Structural and Abmology predict that cortein, bovine acidic seminal fluid protein and Xenopus laevis tolloid-like protein. Structural analysis and homology predict that croptocins. The human zvegf3 gene has been mapped to chromosome 4q28.3. CyrGF3 polypeptides complex with a second polypeptide to form multimeric proteins. The human zvegf3 gene has been mapped to chromosome 4q28.3. CyrGF3 is useful for stimulating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVEGF3 is useful for regulating (post-development) organ growth, regeneration and mindenance, as well as tissue maintenance and repair processes. ZVEGF3 antagonists are useful for treating cancer, rheumatoid arthritis, disbetic retinopathy, ischemia, vascular intimal hyperplasia, atherosclerosis, wound healing, chronic liver disease and haemangioma cformation. ZVEGF3 can also be used to modulate neurite growth and for development of the nervous system, and for treating neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel zvegf3 polypeptides and nucleotides encoding them useful for
stimulating growth of smooth muscle cells and fibroblasts comprising an
epitope bearing portion of a specific amino acid sequence
                                                                                                                             Vascular endothelial growth factor; homologue; zvegf3; CUB domain; Cysteine knot; platelet-derived growth factor; PDGF; neuropilin; chromosome 4q28.3; cytostatic; anti-psoriatic; anti-inflammatory; anti-diabetic; ophthalmological; anti-rheumatic; anti-arthritic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 1848; DB 21; Length 345; 100.0%; Pred. and/or growth or motility of cells expressing a PDGF-C receptor.

PDGF-C polypeptides can be used in pharmaceuticals for promoting cell proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation. PDGF-C antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in a mammal. Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of PDGF-C pDGF-C antagonists can also be used to inhibit tissue

Common and the control of tumour cells into a normal population of cells. Antagonists can also be used to treat fibrotic conditions, especially found in the lung, kidney or liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

The patent discloses materials and methods for reducing cell
proliferation or extracellular matrix production, treating fibrosis and
ceducing stellate cell activation in a mammal. The method comprises
administering a composition containing a Evegf3 antagonist in combination
with a delivery vehicle. The Evegf3 is a protein that is structurally
related to platelet-derived growth factor (PDGF) and the vascular
endothelial growth factors (VEGF). The Evegf3 protein is also designated
cendothelial growth factors (VEGF). The Zvegf3 protein is also designated
an "VEGF-R" and "PDGF-C". The Zvegf3 antagonist is useful to block the
mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat
keloids, scleroderma, fibrotic disorders of liver such as chronic active
hepatitis, fulminant viral hepatitis, post necrotic cirrhosis and
alpha-1-antitrypsin deficiency, fibrotic disorders of the kidney such as
diabetic glomerulosclerosis, focal glomerulosclerosis, diabetic
nephropathy, amyloidosis and renal arteriosclerosis, fibrotic disorders
of the lung such as silicosis, asbestosis, idiopathic pulmonary fibrosis,
bronchiolitis obliterans-organising pneumonia and pulmonary fibrosis,
tibrotic disorders of pancreas, fibroproliferative disorders of the
vasculature such as transplant vasculopathy and fibroproliferative
disorders of the bone such as osteopetrosis and hyperostosis.
The present sequence is mouse Evegf3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

The invention relates to an isolated polypeptide, designated zvegf3 reactuar endothelial growth factor-like protein) of 111-136 amino acid residues in length and comprises the sequence appearing as ABG92889 from amino acid residues 23-345. Also included are an isolated protein comprising a first polypeptide disulphide bonded to a second polypeptide, where each of the first and second polypeptides is from zvegf 3, and where the protein modulates cell proliferation, differentiation, metabolism or migration, the zvegf 3 encoding polynucleotides and zvegf 3 expression vectors and host cells. Zvegf 3 is useful as additives in tissue adhesives for promoting revascularisation of the healing tissue, for designing molecules that cardicovascular development, cartilage and limb development, and T and B-cell function, and for imaging tumours or other sites of abnormal cell

The sequences given in AAB47889-90 represent human and mouse zvegf3,
respectively. zvegf3 is a platelet derived growth factor (PDGF) homolog
and it was used in the method of the invention for promoting growth of
bone, ligament or cartilage and stimulating proliferation of osteoblasts
or chondrocytes in a mammal. The proteins used were preferably a dimeric
cor chondrocytes in a mammal. The proteins used were preferably a dimeric
cor protein, with a delivery vehicle. The method of th invention is useful
for promoting growth of bone, ligament or cartilage in a mammal, where
the composition is administered at a site of a bony defect, preferably
a fracture, bone graft site, implant site, or periodontal pocket, and
for stimulating proliferation of osteoblasts or chondrocytes in a
mammal. It is further useful for promoting proliferation of osteoblasts,
osteoclasts, chondrocytes or bone marrow stem cells, where the bone
marrow stem cells are harvested from a patient prior to culture. The
method is therefore useful for treating osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEVEBSDGSVL 120

The method involves introducing a transgenic PDGF-C DNA into a cell of a non-human animal, introducing the cell into a non-human animal and allowing the cell to develop into a transgenic, non-human animal. The transgenic animal is useful as a model to study disease states characterised by over-expression of PDGF-C and to find therapy for those diseases, particularly hypertrophy and fibrosis in various organs including the heart. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEFSDGSVL 120

New isolated zvegf3 polypeptide, useful for treating cancer, Alzheimer's disease, Parkinson's disease, chronic active hepatitis, hepatic vein thrombosis, comprises growth factor domain and CUB domain

Claim 1; Fig 6; 73pp; English.

The present invention relates to the isolation of a growth factor homologue referred to as zvegf3, and the polymucleotide sequence encoding It. The zvegf3 polypeptide is useful for stimulating the growth of fibroblasts or smooth muscle cells, or for activating a cell-surface platelet-derived growth factor (PDGF) alpha receptor. The zvegf3 polypeptide is useful as a PDGF alpha receptor agonist and thus is useful for treating full-thickness skin wounds, female reproductive tract and prolonged bleeding, periodottal disease, damaged liver tissue, and duodenal ulcers. The polypeptide is also useful as an additive in tissue adhesives for promoting revascularisation of healing tissue. The zvegf3 polypeptide is also useful for treating liver damage including damage due to liver disease, chronic active hepatitis, hepatic chronic passive congestion (CPC), central haemorrhagic necrosis (CHV), hepatic vein thrombosis, portal vein thrombosis, cardiac sclerosis, and many types of cirrhosis. The polypeptide is useful for enhancing expansion and mobilisation of endothelial precursor stem cells, creating and stabilising new vessel formation in areas requiring neovascularisation, including areas of ischaemia, organ transplants, wound healing, and tissue graffing. It may be used for treating peripheral neuropathies by increasing spinal

                                                                                                                                                                                                                                                                                                                                                                                                                                              9
            treatment for the regeneration of neurite outgrowths following strokes, brain damage caused by head injuries, and paralysis caused by spinal hiluries. Application may also be made in treating neurodegenerative diseases (e.g. multiple sclerosis, Alzheimer's disease, Parkinson's disease), diabetic retinopathy, psoriasis, arthritis, scleroderma, and reducing fibrosis, keloids, liver fibrosis, lung fibrosis, khoney fibrosis, and glomerulosclerosis. An antibody that binds zvegf3 is useful for blocking the mitogenic, chemotactic, or angiogenic effects of zvegf3, and for treating proliferative vascular disorders, ocular neovascularisation, inflammatory disorders, rheumatoid arthritis, psoriasis, cancer, impaired or excessive vasculogenesis or angiogenesis, and diseases of the nervous system. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VEGF-E; human; vascular endothelial cell growth factor; wound repair; treatment; cardiovascular disorder; endothelial disorder; therapy; tissue generation; regeneration; cardiac hypertrophy; cancer; detection; angiogenic disorder; age-related macular degeneration; vascular disease; neovascularization; tumor; gene mapping.

tranquillizer, vulnery and cardiant activity. VBGF-E can be administered tranquillizer, vulnery and cardiant activity. VBGF-E can be administered therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially by expressing encoding polynucleotides, to regeneration, and may especially be used to treat cardiac hypertrophy. It can be combined with a carrier in pharmaceutical compositions, which can be administered to treat arrains thypertrophy. It can be combined with a carrier in pharmaceutical compositions, which can be administered to treat antiagonists and agonists, and the antagonists and administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or age-related macular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also useful to detect VEGF-E polypeptide, especially to diagnose are also cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation), by contacting the antibody with a tissue sample and detecting formation of an antibody-VEGF-E polypeptide complex. Polymucleotides encoding the united of diagnose cardiovascular and endothelial disorders in the cancer of the cancer of the complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in mammals, by detecting abnormally high or low VEGF-E gene expression in tissue samples. They can also be used to diagnose a disease or susceptibility to a disease related to a mutated form of VEGF-E (e.g. a cardiovascular, endothelial or angiogenic disorder such as a tumor), by detecting a mutation in the VEGF-E-encoding sequence isolated from a sample. They may also be used to produce probes useful to detect related sequences or for gene mapping. This sequence represents the human VEGF-E protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240

The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AA233891 to AAZ34338, and AAY41685 to AAV41774 represent polymucleotide and polypeptide sequence given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New secreted and transmembrane polypeptides and their polynucleotides, useful for treating blood coagulation disorders, cancers and cellular adhesion disorders -

VEGF-R can be used in assays to identify compounds that bind to it or that antagonize its activity. VEGF-R antagonizes (e.g. anti-VEGF-R antagonizes (e.g. anti-VEGF-R antagonizes (e.g. anti-VEGF-R instibution tissue growth. This is useful for inhibiting tissue growth. This is useful for inhibiting transcr. VEGF-R itself can be used to stimulate tissue growth, anglogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of

Zvegf4 is a member of the PDGF (platelet-derived growth factor)/VEGF (vascular endothelial growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

```
cc characterised by a PDGF cystine knot structure, and a CUB domain (AABA8655) which has a beta barrel structure. Zvegf4 has PDGF-like activity, having mitogenic activity on fibroblasts, vascular smooth muscle cells and pericytes, and has also been shown to stimulate bone growth. The invention also relates to fusion proteins comprising human cyceff or fragments thereof, particularly human zvegf4/human zvegf4/human zvegf4 to activations; expression constructs and host cells comprising human zvegf4 cudies or human zvegf4 or a fragment thereof; a method of activating a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a cell-surface PDGF receptor using a zvegf4-derived polypeptides; and a method of detecting a genetic zvegf4-derived polypeptides; and a method of detecting a genetic zvegf4-derived polypeptides; and a method of detecting a genetic zvegf4-derived polypeptides; and a method of detecting a genetic zvegf4-derived polypeptides; and a method of detecting a genetic conformality in the zvegf4 gene of a patient. Zvegf4 proteins and derived fragments may be used to stimulate tissue development or repair, or cellular differentiation or proliferation. They are particularly used for the treatment or repair of liver damage, and may also be used to multiple sclerosis). Due to their costeogenic activity, they may also be in the treatment of periodontal disease and fractures. They may also be unded endothelial precursor stem cells, which may be useful in the treatment of ischaemia, in wound healing, and in the modulation of the immune system. The present sequence represents human zvegf3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241 LIBEVRLYSCTPRNFSVSIRBELKRIDTIFWPGCLLVKRCGGNCACCLHNCNBCQCVPSK 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC78458 to AAC78599 represent polynucleotide and BST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polymerlades. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive using the polypeptides for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bloactive molecules to cells. AAC78600 to AAC78897 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MSIFGLILITSALAGQRQCTQAESNLSSKFQFSSNKEQNGVQDPQHERIITVSTNGSIHS

This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antitheumatic, antiathritic, antipacriatic and antidabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, Application US/09040220D
Setent No. 6391311
GENERAL INFORMATION:
APPLICANT: Ferrara, Napoleone
APPLICANT: Forrara, Napoleone
APPLICANT: KNO, SOPHIA S.
TITLE OF INVENTION: NOVEL POLYPEPTIDES HAVING HOWOLOGY TO VASCULAR
TITLE OF INVENTION: BENOTHELIAL CELL GROWH FACTOR AND BONE MORPHOGENETIC
TITLE OF INVENTION: PROTEIN 1 AND NUCLEIC ACIDS ENCODING SAME, THEIR USES,
TITLE OF INVENTION: AND PROCESSES FOR THEIR PRODUCTION
FILE REPRESENCE: P1122
CURRENT APPLICATION NUMBER: US/09/040,220D
CURRENT FILING DATE: 1998-03-17
SEG ID NOS: 8
                                                                                                                                                                                                                                                    120
